

LESTER LANCE J. BERMAS

Bacoor, 4102 PH. | (63+) 916 5454 525 | bermas.lester10@gmail.com

A student from the Technological University of the Philippines. I'm a 22-year-old coding enthusiast with a love of reading and an aptitude for computer networking and debugging. With each line of code, I hope to have a positive impact and contribute to the ever-changing world of technology.

TECH STACK:

BACKEND: Php, Java, Python, NodeJS, Javascript

FRONTEND: HTML5, CSS3, Bootstrap, Tailwind, React.JS

DATABASES: SQL, MySQL, MongoDB, PostgreSQL

FRAMEWORKS: Laravel, Django

VERSION CONTROL: Git, GitHub.

PROJECTS:

February 2024 - Present

MergeIT - Consolidation of Requests with GeoCode, Area Breaking, and Data Feeding. The objective is to verify that users can efficiently consolidate all approved requests. Uses python, javascript, and tailwind.

March 2024 - Present

StampPHP - I've embarked on a PHP Laravel project, integrating a NoSQL database. This venture centers on mastering Laravel's intricacies and the unique dynamics of NoSQL databases like MongoDB. My aim is to broaden my skill set while tackling the complexities of building a social media platform.

November 2023 - Present

Web-based Payroll System - Our extensive capstone project resulted in the creation of a comprehensive web-based Payroll System. This system boasts advanced features like Fingerprint Biometrics and NodeMCU integration, alongside essential PHP and Javascript components. Drawing inspiration from HRIS principles, our project promises a seamless blend of innovation and practicality, offering a modern solution to traditional payroll management.

ADDITIONAL PROJECTS:

- **RocketChat** - Open source Github repository, contribute to Deprecate mute/unmute and convert to end-point

- **Haniebuys** - E-Commerce type of website, created for a specific entity who sells K-POP Merchandises

- **BarangayData** - A Java application that act as a centralized data for a specific barangay, it contains the residence information and blotter system.

- **Document Requests** - Users interact with the system to request specific documents. It centralizes document management and ensures that users can access the information they need efficiently.

- **SENDIT** - A chat platform that uses synchronous fetch of data, no socket needed.

-FREELANCING

June 2019 - May 2023

- Develop a website for a startup clothing company using Php, Laravel framework, and MySQL for Database then utilize 000webhost for free hosting.
- Collaborate with developers to Create a system for ID System with Barcode using C++ and MongoDB.
- Creates an application that saves the transactions, computes the overall income, and returns an XML file that may be used to invoice the miners, using Apache NetBeans IDE and Java programming language.

EDUCATION:

June 2019 - Present

- Technological University of the Philippines - Manila
Bachelor of Science in Information Technology

- Pasay City South High School
High School graduate
Information and Communication Technology (SHS)

June 2014 - Mar 2019

FUTURE IDEA:

- Develop a social media platform where is accessible only for the Philippines. Not only a social media but a platform where a Filipino entrepreneur can buy & sell a product and showcase the uniqueness of their assets.
